

ClubOps AI — RAG Knowledge Base

Document Type: Historical and operational knowledge for RAG ingestion

Club: Tech Innovators Club (TIC)

Primary Event: TechFest 2026

Purpose: This document contains only knowledge/data. It intentionally does not contain a question or test-question section.

1. TechFest 2026 Event Plan

The TechFest 2026 event is scheduled for 18 January 2026 at the City College Auditorium and Innovation Block. Expected attendance is 850 participants.

The event includes an opening ceremony, technical workshops, a coding competition, a project exhibition, sponsor presentations, and a closing ceremony.

The event plan was approved by the faculty coordinator on 20 November 2025. Venue booking was confirmed on 28 November 2025. Registration was scheduled to open on 5 December 2025 and close on 15 January 2026.

The organizing team consists of Registration, Technical, Marketing, Sponsorship, Venue, Hospitality, Finance, and Volunteer Operations teams. Each team maintains its task list and reports blockers during weekly meetings.

Critical activities include venue confirmation, sponsor confirmation, workshop speaker confirmation, registration setup, volunteer allocation, equipment testing, and final event-day rehearsal.

Equipment testing depends on the venue team confirming the final room layout and electrical points.

2. TechFest 2025 Post-Mortem

TechFest 2025 had approximately 620 participants. The event was successful overall, but the organizing committee recorded several operational problems.

The most significant issue was late volunteer allocation. Several volunteers received responsibilities only three days before the event, causing confusion about reporting times and ownership.

The technical team experienced a projector failure during the first workshop. The post-mortem recommended testing every projector, microphone, HDMI cable, and backup laptop at least one day before the event.

Registration queues became long between 9:00 AM and 9:45 AM because many participants arrived simultaneously. The committee recommended QR-based check-in and two separate registration counters.

The marketing team reported that social-media promotion started too late. The recommended approach was to begin promotion at least four weeks before the event and publish the final schedule one week before the event.

The finance team found that catering costs exceeded the initial estimate by 12% because attendance was higher than expected and the final vendor quotation included additional service charges.

3. Venue Rules and Requirements

The City College Auditorium has a maximum seated capacity of 900 people. Innovation Block seminar rooms have a maximum capacity of 120 people per room.

The auditorium can be used from 8:00 AM to 8:00 PM unless an extended-use request is approved. Sound equipment must be operated by an authorized technician. Food and beverages are not permitted inside the main auditorium.

The venue requires the organizer to submit the final seating plan, equipment list, emergency contact list, and expected attendance at least seven days before the event.

Emergency exits must remain unobstructed. Temporary electrical connections must be inspected by the venue technician. The organizer is responsible for cleaning the venue after the event.

A backup room should be reserved for workshops when possible because technical or scheduling problems may require a room change.

4. Sponsorship Guidelines

TechFest sponsorship packages are divided into Gold, Silver, and Community Partner categories.

Gold sponsors receive logo placement on the main event banner, a five-minute stage presentation, and a booth in the exhibition area.

Silver sponsors receive logo placement on digital promotional material and one exhibition booth. Community Partners receive acknowledgment in selected digital communications.

All sponsorship commitments must be recorded in the sponsorship tracker. A sponsor commitment is not considered confirmed until the sponsorship lead and faculty coordinator approve the agreement.

Sponsors may request branding changes, booth locations, presentation slots, or participant engagement activities. Requests affecting the event schedule or venue must be reviewed by the relevant team.

A previous sponsor meeting identified an unresolved requirement: a sponsor wanted a 15-minute technical presentation while the published schedule allowed only 10 minutes. The sponsorship lead was asked to resolve the conflict with the program team.

5. Volunteer Handbook

Volunteers are expected to report at least 60 minutes before their assigned activity. Every volunteer should have a clearly defined owner, backup person, reporting location, and communication channel.

Registration volunteers should be comfortable handling QR scanners and participant queries. Technical volunteers should understand basic projector, microphone, laptop, and presentation setup. Hospitality volunteers handle speaker reception, refreshments, and guest movement.

A volunteer should not be assigned overlapping responsibilities during the same time period. Critical activities should have a backup volunteer when possible.

The 2025 post-mortem showed that unclear ownership caused delayed setup. The 2026 plan therefore requires task ownership to be finalized at least seven days before the event.

6. Budget Report

The approved TechFest 2026 budget is INR 4,50,000.

Planned categories are: venue and infrastructure INR 90,000; food and refreshments INR 1,20,000; marketing INR 45,000; prizes INR 75,000; equipment INR 55,000; and contingency INR 65,000.

The finance team recommends maintaining at least INR 50,000 of contingency allocation until the final week. Spending that changes a major budget category should be approved by the finance lead.

Based on the 2025 post-mortem, catering is considered a high-variance category because final attendance can differ from the initial estimate.

Previous budget reviews identified unplanned service charges and last-minute equipment rentals as common reasons for overspending.

7. Marketing Guidelines

The marketing campaign should begin four weeks before TechFest.

The recommended sequence is event announcement, speaker and sponsor highlights, workshop announcements, registration reminders, schedule publication, and final-day reminders.

The marketing team should coordinate with sponsorship because sponsor logos and approved branding must be used consistently across posters and digital communications.

Public-facing announcements must use the final approved event date, venue, registration link, and schedule. Draft messages should be reviewed before publication.

The 2025 marketing review concluded that last-minute promotion reduced registration conversion and created unnecessary pressure during the final week.

8. Previous Planning Meeting Notes

During the 12 December 2025 planning meeting, the committee discussed volunteer allocation, sponsor requirements, venue equipment, and registration.

The venue lead agreed to confirm electrical points and projector availability. The sponsorship lead agreed to resolve the sponsor's request for a longer presentation. The volunteer lead agreed to prepare the first allocation list within three days.

The marketing lead proposed publishing the final workshop schedule one week before the event. The finance lead reminded all teams to submit expected expenses before making new purchases.

The committee agreed that unresolved blockers should be reported during the weekly operations meeting rather than waiting until event day.

9. Risk Register — Historical Examples

Volunteer overload can occur when too many responsibilities are assigned to a small number of experienced volunteers. The mitigation is to monitor task load and maintain backup assignments.

Equipment failure can occur when equipment is not tested before the event. Mitigation includes a full technical rehearsal and backup cables and laptop.

Registration queues can occur because of concentrated participant arrivals. Mitigation includes QR check-in and multiple counters.

Schedule conflicts can occur when a sponsor presentation request exceeds available program time. Mitigation is to resolve the request during schedule finalization.

Budget overruns can occur because of late purchases and unexpected vendor charges. Mitigation includes protecting contingency funds and requiring approval for major changes.

10. Event-Day Checklist

Before 8:00 AM, verify registration desks, QR scanners, badges, signage, microphones, projectors, laptops, extension boards, emergency exits, and volunteer attendance.

Before the opening ceremony, confirm speaker arrival, presentation files, stage setup, sponsor branding, photography coverage, and communication channels.

During workshops, monitor room capacity, equipment status, speaker requirements, participant movement, and schedule adherence.

Before closing, collect feedback, confirm prize distribution, verify sponsor acknowledgments, and record unresolved issues.

After the event, return equipment, clean the venue, reconcile expenses, collect team reports, archive documents, and conduct a post-mortem meeting.

11. Club Process Rules

Every operational task must have an owner and due date. Dependencies should be recorded when one task cannot start or finish before another task is completed.

Tasks affecting critical event activities should receive higher monitoring priority. A blocked task on a critical dependency chain should be escalated during the operations meeting.

AI-generated changes to tasks, volunteers, schedules, budgets, or other authoritative records must be presented as a proposal and require authorized human confirmation before being applied.

PostgreSQL is the authoritative source for current event state. Historical documents, meeting notes, reports, and guidelines are knowledge sources for the RAG system.

12. Historical Lessons Summary

Repeated lessons from previous planning documents are: finalize ownership early, test critical equipment before event day, and protect contingency budget for unexpected costs.

The committee also emphasized coordination among sponsor, venue, marketing, finance, and volunteer teams rather than handling decisions independently.

Current task status, owner, due date, and assignment should come from the live operational database. Historical questions, process explanations, previous decisions, and lessons learned should use the RAG knowledge base.
